## Trilby Wash Feasibility Study

The U.S. Army Corps of Engineers (USACE) and the Flood Control District of Maricopa County (District) will host a public meeting to present information regarding a feasibility study of Trilby Wash and the McMicken Dam Project. USACE is the lead agency for this study and the District is a project partner. At this meeting, the public will have an opportunity to talk informally with team members about the project.

The primary purpose of this study is to develop and evaluate potential non-structural and engineered solutions to address flooding issues within the study area. It will also investigate opportunities for ecosystem restoration and recreation consistent with flood risk management.

The Trilby Wash Study area encompasses the Trilby Wash watershed upstream and downstream from the McMicken Dam Project which includes: McMicken Dam, McMicken Dam Outlet Channel and McMicken Dam Outlet Wash. The McMicken Dam Outlet Wash discharges to the Agua Fria River.

### Public Meeting

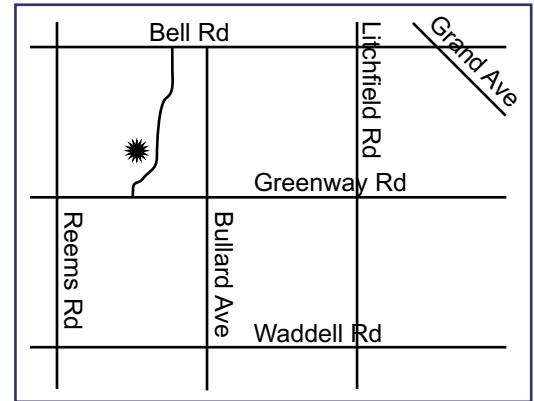

6:00—7:30PM

Presentation: 6:15PM

Thursday, June 25, 2009

Dysart Education Center

15802 N. Parkview Place, Surprise

Map not to Scale
